

USTAZ

Trusted home-service professionals, on demand.

Pakistan's verified marketplace for electricians, plumbers, carpenters, AC, solar & cleaning — with live tracking and a 3-day work guarantee.

- **Live MVP:** ustaz-bice.vercel.app

Applying for NIC Karachi incubation

OUR VISION

Vision

Making trusted home services as easy to book as a ride — across Pakistan.

Because today, a family lets an unknown stranger into their home and hopes for the best.

We are transforming an informal, trust-deficient market into a verified, real-time, accountable platform — and bringing dignity, steady digital income, and a portable reputation to Pakistan's millions of unrecognized tradesmen.

3. TEAM & CURRENT TRACTION

Who's building it — and what's already shipped

Team — 3 co-founders: CEO/Tech · Product & Finance · CMO/Design.

Marjan Ahmed — full-stack engineer, built the entire platform solo at 17 (GIAIC Senior · Agentic-AI engineer, Filion Capital · AI-finance hackathon winner).

- ▶ **Built product** — live MVP + installable PWA at ustaz-bice.vercel.app (not a prototype or mockup).
- ▶ **8+ core systems live** — phone-OTP auth, PostGIS matching, live GPS tracking, chat + push, prepaid wallet & commission, 3-day warranty, ratings, admin portal.
- ▶ **Security-hardened** — RLS on every table + SECURITY DEFINER RPCs, senior-reviewed auth.
- ▶ **Self-funded, built solo** — zero external capital spent to reach a production-grade platform.
- ▶ **Pilot** — live in Karachi, onboarding the first providers now (applying to NIC Karachi).

Built & shipped — solo

6 service categories

8+ core systems live

100% RLS-secured tables

Rs. 0 external capital raised

4. PROBLEM & CUSTOMER PAIN POINTS

Home services in Pakistan are broken on trust

The anxiety: a Karachi mother's AC dies in the June heat. She must let an unknown man into her home, with no idea who he is, what he'll charge, when he'll arrive, or whether it'll break again tomorrow.

No verification

Support

An unknown stranger in your home — no identity check, no accountability.

Opaque pricing

Financial

Overcharging is routine — no standard rates, no upfront quote, no receipt.

No recourse / guarantee

Process

If the work fails a day later, the worker vanishes — broken workflow.

No visibility / ETA

Productivity

“He's on the way” means waiting blind for hours — like a ride with no map.

Supply side ignored

Financial + Process

Skilled workers have no steady demand, no digital reach, no portable reputation.

Pain mapped to NIC's four categories — Financial · Productivity · Process · Support.

5. SOLUTION & MVP

Verified. Tracked. Guaranteed.

An on-demand marketplace of verified pros, matched by location and tracked live.

1

Pick a service & location

Choose from electrician, plumber, carpenter, AC, solar or cleaning — set your spot on the map.

2

Get matched instantly

PostGIS finds nearby phone-verified providers; they accept in real time.

3

Track live & pay on done

Watch your pro arrive on a live map, chat in-app, pay on completion — covered by a 3-day warranty.

Trust built in: phone-verified providers · live GPS · in-app chat & push · 3-day free re-fix · two-way ratings · prepaid escrow wallet.

A real-time marketplace, engineered to scale

FRONTEND

- ▶ Next.js 15 (App Router, Turbopack)
- ▶ React + Tailwind, PWA (offline-ready)
- ▶ Capacitor — native Android shell
- ▶ Google Maps live tracking UI

BACKEND

- ▶ Supabase Postgres + PostGIS
- ▶ Row-Level Security + SECURITY DEFINER RPCs
- ▶ Realtime (broadcast + postgres_changes)
- ▶ Edge Functions (Deno)

SERVICES

- ▶ Twilio Verify — phone OTP
- ▶ Firebase Cloud Messaging — push
- ▶ Google Maps — geocoding & maps
- ▶ Resend — transactional email

Building now (pilot): automated JazzCash/EasyPaisa webhook reconciliation — replacing manual receipt review — plus native iOS/Android apps.

Next: payment-gateway + Raast · per-query KYC & background checks · multi-city expansion · provider financing & insurance partnerships.

6. CUSTOMER SEGMENTATION & PERSONA

Two personas, served on both sides

DEMAND — “Safe Household Manager”

Demographic: age 28–50, urban Karachi, SEC A/B household.

Geographic: DHA, Clifton, Gulshan, PECHS, North Nazimabad.

Psychographic: values safety over price; has been overcharged; manages the home; won't risk an unverified stranger; wants a visible ETA and accountability.

Trigger: AC breaks in June — needs a trusted technician today, not a stranger from a Facebook group.

SUPPLY — “Underserved Tradesman”

Demographic: age 22–45, skilled electrician / plumber / AC tech.

Geographic: works across Karachi, based in lower-income areas.

Psychographic: wants steady, predictable digital demand and a reputation that travels with him; tired of middlemen taking large cuts.

Trigger: wants to stop depending on ustads / contractors and own his own customer pipeline.

This two-sided pool — Karachi's middle-class households × the city's skilled tradesmen — is our SAM foundation (sizing on next slide).

7. MARKET SIZING (TAM · SAM · SOM)

A vast, underserved, digitizing market

01

TAM

~\$3–5B

Pakistan home services (informal + formal). Source: SMEDA / ILO, 2024.

02

SAM

~\$600M

Smartphone-enabled urban households — Karachi, Lahore, Islamabad, Faisalabad. Source: PTA / PBS HIES, 2025.

03

SOM

~PKR 1.4M

Year 1, Karachi: 5,000 households × 4 jobs/yr × PKR 72 commission.

Bottom-up SOM: 5,000 Karachi households × 4 jobs/yr × PKR 600 avg job × 12% = ~PKR 1.44M (Year 1, conservative — matches our QRR plan).

Market data limited at this stage — joining NIC to validate. Sources: SMEDA/ILO 2024 · PTA/PBS HIES 2024–25.

8. UNIQUE VALUE PROPOSITION (UVP)

Trust a stranger in your home — for the first time.

USTAZ verifies every pro, shows you exactly where they are, and **guarantees the work for 3 days — or we fix it free.**

Halal by design — no interest, no hidden charges, just a transparent service fee.

Feel safe at the door

See them on the way

Covered for 3 days

Halal, transparent fee

We compete with chaos — and beat it

Alternative	Verified	Live GPS	Warranty	Escrow	Reputation	Price clarity
USTAZ	✓	✓	✓	✓	✓	✓
Mahir	~	✗	✗	✗	~	~
RepairGuru	~	✗	✗	✗	~	~
OLX / classifieds	✗	✗	✗	✗	✗	✗
Facebook groups	✗	✗	✗	✗	✗	✗
Word-of-mouth	✗	✗	✗	✗	~	✗

The real competitor is informality — ~90–95% of the market is still cash, unverified, untracked. (industry estimate)

Why bookings stay on-platform (anti-disintermediation):

3-day warranty & dispute cover apply only to in-app jobs · a provider's ratings, job history & search visibility — i.e. their future demand — live only here · customer loyalty credits + wallet incentives. Going cash-direct forfeits all of it.

Two acquisition engines, one flywheel

DEMAND · acquiring customers

- ▶ **Meta / TikTok ads** — Karachi women 25–45, home-owner interest.
- ▶ **SEO landing pages** — per service × city (already shipped — a live channel asset).
- ▶ **Residential societies (B2B2C)** — one manager unlocks 200+ households.
- ▶ **Referral loop** — customers earn for each new customer.
- ▶ **Community & mosque networks** — trust-building in conservative areas.

SUPPLY · acquiring providers

- ▶ Karachi trade hubs (Saddar, Lea Market, Sohrab Goth).
- ▶ master tradesmen refer apprentices.
- ▶ satisfied pros recruit peers, at zero cost.
- ▶ electrician & plumber guild outreach.

Referral loops on both sides drive CAC down over time as the network compounds.

11. REVENUE STREAMS & BUSINESS MODEL

Free credit, then a 12% prepaid commission

HOW WE EARN · prepaid wallet

- 1 Free Rs. 500 welcome credit**
Every new provider claims Rs. 500 on their dashboard — start earning with no upfront cost.
- 2 12% deducted per completed job**
On each finished job the platform deducts a 12% commission from the provider's wallet (e.g. a Rs. 500 job → Rs. 60).
- 3 Top up when credit runs low**
The free Rs. 500 credit covers the first several jobs; then the provider tops up to keep receiving jobs (0 balance = paused).

TOP-UP PACKAGES

Starter

Just testing

Rs. 500

Standard

Regular work · popular

Rs. 1,000

Pro

Full-time

Rs. 2,000

Pay via Easypaisa · JazzCash · Bank → upload receipt → admin credits wallet.

Status: the 12% monetization engine is fully built & live in-product. Pre-revenue today — pilot providers run on the free Rs. 500 credit, so commission collected ≈ Rs. 0 so far; revenue starts as they exhaust credit and top up.

Sharia (ujrah): fee charged ONLY on completed, customer-confirmed jobs; unused prepaid credit fully refundable; Sharia advisory via NIC pre-launch. No interest, no ambiguity.

12. COST STRUCTURE (CapEx vs OpEx)

A lean, software-margin business

CAPEX · one-time

- ▶ Product dev — done (founder-built)
- ▶ Office space & setup
- ▶ Brand & design system
- ▶ Native mobile app build
- ▶ Verification system (one-time build)

OPEX · monthly (PKR — illustrative 2025 list prices)

Line item	Pre-revenue	500 jobs/mo
Supabase + Vercel	~8–12K	~15–25K
Twilio OTP	~3K	~8K
Google Maps API	~2K	~6K
FCM / Resend	Free	Free
Domain & misc	~3K	~3K
Total cloud burn	~16–20K	~32–42K

With NIC Karachi incubation: free office + zero utilities save ~PKR 80–120K/mo — that single saving dwarfs our entire cloud burn, redirected straight into provider acquisition. Variable OpEx (scales with volume): per-query KYC/identity checks + field acquisition (agent + signups). The free Rs. 500 credit is a non-cash virtual token — it delays commission, not upfront cash.

13. FINANCIALS

Lean burn, scalable margins

Pre-revenue MVP today — high-margin economics as marketplace liquidity builds.

Revenue driver

Completed jobs × commission per job. Grows with provider liquidity & repeat rate.

Gross margin

Software margins — minimal cost per transaction once a city reaches density.

Burn

Lean: cloud + APIs + acquisition. No inventory, no fleet, no salaries beyond core team.

Pre-revenue — joining NIC to build professional financial models with mentorship support.

Unit economics: avg job ≈ PKR 600 → revenue/job = PKR 72 → break-even ≈ 280 jobs/mo at ~PKR 20K cloud burn.

Free Rs. 500 welcome credit = provider-acquisition cost. Figures illustrative until validated — detailed P&L built during incubation.

Building Pakistan's default home-services brand

Exit path

- ▶ **Primary — strategic acquisition:** by a super-app, classifieds leader, telco, or bank scaling into home services.
- ▶ **Likely acquirers:** Jazz / PTCL (telco super-app), OLX Pakistan (classifieds → services), Careem Pakistan, HBL / Meezan (bank-led services).
- ▶ **Secondary — regional roll-up** → dominate Pakistan, then list on PSX or expand to comparable markets.

Corporate structure & governance

- ▶ **Today:** early-stage / unregistered — planning Pvt Ltd (SECP) registration within ~3–6 months of incubation, with NIC legal mentorship.
- ▶ **Equity:** 3 co-founders on an agreed split; 4-year vesting + anti-dilution & exit clauses to be formalised with NIC legal support pre-investment.

15. KEY METRICS & PROJECTIONS

Bottom-up Year-1 economics (FY 2026)

Bottom-up Year-1 plan (illustrative) — built from active providers × jobs × Rs. 72 commission/job.

Metric	Q1 2026	Q2 2026	Q3 2026	Q4 2026
Active providers	40	75	120	175
Jobs / month	480	1,050	1,920	3,150
Commission / job	Rs. 72	Rs. 72	Rs. 72	Rs. 72
QRR — revenue (PKR)	~104K	~227K	~415K	~680K
Customer CAC (PKR)	500	350	230	150

LTV ≈ Rs. 1,300 (≈ 6 jobs/yr × Rs. 72 × ~3-yr retention). **Customer CAC: Rs. 500 → Rs. 150** as referral loops compound.

Provider acquisition (field agent + signups) is budgeted separately. Year-1 revenue ≈ Rs. 1.4M (illustrative bottom-up) — validated in pilot, refined with NIC.

16. FOUNDERS & CORE TEAM

Already built. Ready to scale.

A technical founder, backed by product, finance, growth & design.

MAR

Marjan Ahmed

Founder & CEO

The Hacker / CTO — NIC archetype

Full-stack engineer — built all of USTAZ solo at 17.
GIAIC Senior · Agentic-AI engineer at Filion Capital ·
AI-finance hackathon winner.

MAS

Masood Alam

Product Director & Financial Consultant

The Hustler — NIC archetype

Steers product direction and the commission / wallet
financial model & unit economics.

MSA

Muhammad Sufyan Ahmed

CMO & Designer

Growth & Brand — NIC archetype

Owns brand, growth marketing and the product
design system & UX.

Staying lean: we batch-verify through trade associations & guild leaders (20–30 tradesmen at a time) as proxy aggregators — so 3 founders scale supply without drowning in manual checks.
Post-incubation: recruit a COO for city ops (NIC helps).

USTAZ

Trusted pros, on demand.

Thank you
